20/40-GALLON STAINLESS STEEL SWING TOP WASTE RECEPTACLE

20-Gallon
ALP466-20

40-Gallon
ALP466-40

A high-traffic environment doesn't have time for a waste bin that becomes a bottleneck. When a facility transitions from standard receptacles to the 20 or 40 Gallon Stainless Steel Swing Top, they aren't just buying a container; they are investing in a more efficient workflow and a cleaner professional image.

Imagine a busy hospital corridor or a bustling corporate lobby at peak hours. Standard bins overflow quickly, and flimsy lids become points of failure or hygiene concerns. This receptacle was engineered specifically to solve those friction points. With a 20 or 40 gallon capacity, your maintenance team spends less time on bag rotations and more time on high-value tasks. The dual-entry swing lid is the silent hero of the design, providing a seamless, hands-free experience for users from either side, ensuring that waste is deposited quickly and hidden immediately. It maintains the "clean-floor" aesthetic required for modern commercial spaces while providing the rugged, industrial reliability of high-grade stainless steel.

FEATURES

Impact-Resistant Rubber Border: A durable rubber gasket protects the stainless-steel finish from metal-on-metal wear during emptying, reduces noise in quiet environments like libraries or hospitals, and provides a tighter seal.

Integrated Bag Clips: Equipped with heavy-duty internal clips designed to lock trash liners securely in place to eliminate liners from collapsing under the weight of heavy waste.

Hands-Free Dual-Entry: The precision-balanced swing mechanism allows for multi-directional access without physical contact with the frame, supporting strict hygiene protocols in high-traffic zones.

Self-Closing "PUSH" Doors: Each swing door is clearly marked with intuitive "PUSH" lettering, guiding users effortlessly and ensuring waste is never left in view.

Commercial-Grade: High-density stainless steel construction offers superior resistance to corrosion, rust, and harsh chemical cleaners.

Smudge-Resistant Finish: The polished stainless steel is designed to mask fingerprints and water spots, maintaining a professional look with minimal upkeep.

FEATURES

HIGH-VOLUME CAPACITY
Specifically sized to handle gallons of waste, significantly reducing the labor hours required for bag rotations.

INTEGRATED BAG CLIPS
Heavy-duty internal clips lock trash liners securely in place to eliminate liners from collapsing under the weight of heavy waste.

FIRE-SAFE ENGINEERING
Naturally non-combustible material provides an essential layer of safety for indoor facilities.
