VANTA 40 GALLON STEEL TWO-STREAM TRASH CAN

With every facility comes essential staples that will always be needed to ensure a tidy and orderly environment. The Vanta 40 Gallon Two-Stream Steel Trash Can is a masterclass in durable design and intuitive waste management, specifically engineered to meet the demands of high-traffic environments. While it excels in modern office suites and healthcare facilities, its premium heavy-duty steel construction, weighing a substantial 76 lbs., makes it equally suited for outdoor placement at stadiums, under awnings or covered entryways. To ensure longevity in these versatile settings, the unit is equipped with four fixed feet for slight elevation and two drainage holes at the bottom to prevent moisture buildup that can be used for mounting.

Sustainability becomes a seamless part of your daily operations thanks to the Vanta's specialized split-lid system, which provides clear physical cues to guide users: a wider opening for the landfill stream and a dedicated mixed-material opening for recycling, complete with the universal symbol. To ensure long-term reliability and ease of maintenance, the lid is secured to the main body with an integrated metal retaining cable, preventing it from being misplaced or damaged during service. Behind its polished exterior, the Vanta is designed for maximum efficiency and hygiene, housing two independent 20-gallon semi-circle liners that allow your maintenance team to empty each stream separately. By combining industrial-strength stability with smart sorting features, the Vanta 40 Gallon Two-Stream Steel Trash Can represents a long-term investment in your facility's cleanliness and environmental responsibility.

FEATURES

Split-Stream Lid Design: The top is divided into two distinct sections to facilitate source-separation and reduce recycling contamination.

Heavy-Duty Steel Construction: Fabricated from premium-grade steel to withstand high-traffic commercial use without denting or warping.

Stationary Stability: A substantial product weight of 76 lbs. ensures the unit remains firmly in place, providing a permanent, high-end feel compared to lighter plastic or thin-gauge metal alternatives.

Versatile Indoor/Outdoor Use: Specifically designed for interior environments or covered outdoor areas such as awnings, entryways, and transit hubs.

Elevated Fixed Feet: Equipped with four fixed feet that provide slight elevation, protecting both the unit and the flooring while allowing for easy cleaning underneath.

Integrated Drainage: Features holes in the bottom to allow for moisture drainage, ensuring the unit remains clean and dry when used in covered outdoor settings.

Secure Mounting Capability: The base includes pre-drilled holes, allowing the unit to be bolted directly to the floor or concrete for added security and permanent placement in high-traffic or outdoor areas.

Ergonomic Height: Standing at 34.6" tall, the unit is designed for comfortable, reach-free disposal for all users.

FEATURES

TARGETED OPENINGS

Features a wide-mouth opening for general landfill waste and a specialized mixed-material opening for recycling (bottles, cans, and paper).

VISUAL IDENTIFICATION

The recycling side is clearly marked with the universal recycling symbol to guide user behavior intuitively.

INTEGRATED RETAINING CABLE

A heavy-duty security chain connects the lid to the body, preventing the lid from being dropped, misplaced, or damaged during maintenance.

DUAL 20-GALLON BINS

Includes two independent semi-circle liners, providing a total capacity of 40 gallons.

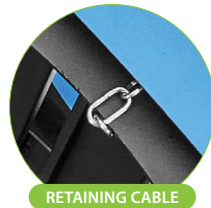

INDEPENDENT SERVICING

The dual-liner system allows maintenance staff to empty the recycling and landfill streams separately.

UNWAVERING GRIP

Integrated metal ears on the exterior of the liner provide a secure grip that locks the bag in place.
